Wool Producers To Have Contracts

Will be on Par with Similar to That of The Wheat Pool

C. Jensen, of McGrath, one of the directors of the Alberta Wheat Pool, and a director of the Co-operative Wool Producers, Ltd., who returned Wednesday from a meeting of the latter organization held in Toronto, stated that the wool producers had decided to work on a contract basis similar to the Wheat Pool.

Contracts, he said, would be presented to the producers for their signature. The contracts would cover a period of three years with wool, druggist privileges at that time. The organization, he mentioned, had a membership from the Atlantic to the Pacific and was controlled by directors from each of the provinces. It had functioned so far that it had handled more than half of the Canadian wool.

2000 YOUNG BRITISHERS ARE COMING TO CANADA SOON

Arrangements have been completed between the overseas settlement office and the Canadian railway whereby 2,000 young, single men will be conveyed to Canada between now and the middle of May. Men who have as yet no preliminary training will engage in firm work.

The British authorities are undertaking the whole financial responsibility for those unable to pay their own transportation and the stipulation was made at least 75 per cent. of the men must be of the unemployed. Other conditions are that as many as possible are to be drawn from the milbing area and all migrants must be 19.

Have you looked at the label on your paper lately? No it none.

Don't Miss "Wings" At Cameo Theatre

This is One of The Best Pictures ever The Red Tied Year

One hundred and twenty airplanes were used by William Wellman, one of Hollywood's youngest directors, in finishing the battle scene of the St. Mihiel drive for "Wings," the great Paramount war aviation spectacle which will be shown at the Cameo here on Easter Monday afternoon and evening. "Wings," which was nearly two years in the making, is a story of the World War from the country's standpoint. The cream of America's aviators were gathered together for the air battle picture, when an area five miles square was reconstructed in six districts of the St. Mihiel region in France.

HAD PRANKS FIRE REPORTED DURING THE PAST WEEK

Last week the Review found a warning for caution in setting off fires in both town and country. Since then there have been several disastrous fires in the province in the latter part of the week. A fire of 20 miles square was burnt away. Several buildings and a number of acres were destroyed. In the Seven Persons district fire swept for 25 miles and the village was in danger for some time. At Tonkin, Sask., thousands of acres of pasture were burnt and buildings on these farms were destroyed.

WHIST DRIVE AND DANCE

St. Mary's Altar Society will hold a whist drive, five hundred cent and dance in Cliff Hall on Friday, April 12th. Good prizes will be offered for cards and the best music procurable for the dance. Refreshments will be served. Admission \$1 a couple extra ladies 50c.

Gordon Memorial Finished Auditorium Was Opened And Consecrated Sunday

Large Congregations at Three Special Services - Splendid Addresses by Visiting Ministers - Church one of Most Complete Among Western Towns.

For their patience in waiting for the long-delayed completion of the auditorium at their church, the people of Gordon Memorial have been well repaid last Sunday when the floor of the auditorium was officially opened and the congregation worshipped in one of the most completely equipped and modern town churches in the province. The many remarks passed regarding the appearance of the church, and the great success and solemnity of the dedicatory ceremony, must have been an inspiration to all those who believed so faithfully to make the opening possible.

The church was opened with three special services—morning, afternoon and evening, and at all three the buildings were taxed to capacity to accommodate the large gatherings. Promptly at the selected hour Mr. Wm. Henderson, the senior elder of the congregation, the man whom there is no more faithful worker in the congregation, presided at the front, and, after offering up a prayer that the new church might be a tower of strength and influence for good in the community, he declared the auditorium officially opened for the service and worship of Almighty God.

Rev. Dr. Kerby of Calgary was the

speaker for the morning worship, and also performed the official dedicatory service. In opening he said he rejoiced with the people of Redcliff on the completion of the church. He did not see how any one interested in the church or the town could look around that congregation with so many young people and such an excellent junior choir without feeling inspired and giving thanks to God. Taking as his subject: "What is the Truth" Dr. Kerby delivered one of the most forceful and inspiring sermons heard here or some time. The many people, he said, spend their time looking for things that are not true instead of looking for the Truth, and he gave illustrations to show that people usually get just what they are looking for. He thought more of the Truth seeker than of the heresy hunter. Under the leadership of the Truth, before the Truth, Hold on to the Truth and Live the Truth, he delivered a sermon for the people in their daily round of a Critique, with Jesus Christ as the embodiment of Truth.

In the afternoon there was a children's service at which Rev. R. Macdonald was the speaker. With "Watch" as his subject he took each letter in the word and divided it into six headings: Words, Acts, Thoughts, Emotions and Heart, and gave a splendid talk under each of these headings. There was also a service of Baptism in which Henry Bruce Webb Shesby and Mary Elaine Sanger were baptized.

For the evening service Rev. Thos. Powick, D. D., superintendent of Missions, was the speaker. "Who Are Christians?" was his subject. Jesus answered this question when he said: "Come, follow Me." Too much attention, the speaker said, was paid to creed in trying to decide who are Christians, and not enough to conduct. To follow Christ was to be a Christian. To do this one must leave behind the lust, the impure, the not-worth-while, and adopt His Spirit, His ideals, His Purpose, and showing kindness, sympathy and His Love to all with whom we come in contact.

At both morning and evening services the choir rendered special and very appropriate music. This was Gordon Memorial's completed auditorium fittingly and impressively opened and consecrated last Sunday.

The completion of this part of the church cost in the neighborhood of \$4,000. The seating was undertaken by the Ladies' Aid at a cost of \$1,629. The junior choir undertook the payment of the organ and the senior boys of the Sunday School furnished the collection plates.

The auditorium is 66 by 36 feet and will comfortably seat 320 adults. The choir loft seats 22 adults and on each side of it is a large, airy room one of which is used by the choir and the other as the minister's study.

It might be suggested that this province hangs its name to Gilberts. It's motto might then be "wherever Gilbert's wall there's a way."

Westminster Singers In Hat April 1 & 2

Will Give One of Their High Class Entertainment in 5th Ave. Church

A rare treat is in store for Westminster in this district when the Westminster Chorus Singers come to Methodist Hat on April 1st and 2nd, to put on their high class entertainments in Fifth Avenue Church. The gentlemen in this company are all English vocalists of renown, draw from St. Paul's, Westminster Abbey, Christ Church Cathedral and the Royal College Chapel. The several boy sopranos are selected from leading church choirs of London.

COMPLETION OF HANNA

BRANCH VERY INDEFINITE

That the Hanna-Medicine Hat line of the Canadian National railway would be completed some time in the future was the assurance given by Sir Henry Thornton, C. N. R. chief. This was the word brought to Dr. Gerhauz who had an interview Mr. Thornton regarding the completion of the railway. The railway chief could not say when the line would be finished.

Mrs. Leo Easton, who has been in hospital for the past three weeks, expects to be home on Saturday. She wishes to thank her many friends who were so kind to her during her illness.

Easter Monday at 3 o'clock in the Parish Hall, St. Andrew's S. W. A. are having a social tea and whist drive. All are invited. Everyone welcome. Tea and whist 25c.

It has been said that gossip mongers, who continually go about spreading all the real and imaginary scandal, are the cause of more trouble, worries, and sleepless nights, than whiskey or war. It came out at an banquet at Owen Sound last week that gossip mongers of that city had driven a woman to commit suicide. One of the gossip admitted on the stand that she knew her gossip had carried to the suicide was untrue.

Town Council Holds Meeting Last Monday

Learn That Gas Wells Are Badly in Need of Repairs

The regular meeting of the Town Council was held last Monday evening. Mayor Wells was again the chair. The following members were present: Mr. Wells, Mr. Kerby, Mr. Henderson, Mr. Macdonald, Mr. Thompson, Mr. Smith, Mr. Jones, Mr. Brown, Mr. White, Mr. Black, Mr. Green, Mr. Grey, Mr. Blue, Mr. Yellow, Mr. Purple, Mr. Pink, Mr. Red, Mr. Orange, Mr. Silver, Mr. Gold, Mr. Bronze, Mr. Copper, Mr. Iron, Mr. Steel, Mr. Lead, Mr. Zinc, Mr. Tin, Mr. Nickel, Mr. Cobalt, Mr. Manganese, Mr. Magnesium, Mr. Calcium, Mr. Strontium, Mr. Barium, Mr. Radium, Mr. Polonium, Mr. Astatine, Mr. Tellurium, Mr. Selenium, Mr. Tellurium, Mr. Selenium, Mr. Tellurium, Mr. Selenium.

After the reading of the minutes Mr. Kerby was heard. He asked if council had, any houses to rent and it was informed that there were none at present. The Utilities Commission wrote approving of estimates as passed by the council and asked for a copy of the statement roll as soon as it was completed. Mr. Baird wrote stating that he had taken up the matter of Mrs. Eley's bill with the Medicine Hat hospital and Dr. McLeod and the hospital had agreed to pay the bill. The Mayor was appointed to take the matter up with both the hospital and Dr. McLeod.

A by-law, authorizing the assessor to assess property in town at 75 per cent. of its value, was introduced, given the several readings and passed. It covers a request from Council for a little ago, asking for a report on the gas wells in town, the department of Interior, Ottawa, wrote stating that several gas wells in town were badly in need of repairs, and suggesting that council use its influence in having these wells put in good condition as soon as possible. The council also suggested that provision should be made for additional wells to take care of the future needs of the town.

Moved by councillor Chapp, seconded by councillor Cook that copy of the letter from the department of the Interior be forwarded to Council. A resolution was passed that the Mayor interview one and one what can be done to remedy present conditions. Carried. Letters were read from four citizens offering prizes for different houses owned by the town. These were referred to the building committee. A \$250 offer of \$250 for a small building off the water line was accepted. Offers submitted for buildings at the last meeting, and referred to the building committee, were rejected. A price of \$400 a thing was set on loose brick from building.

The Mayor reported that he had been interviewed by representatives from Medicine Hat council informing him that the city is prepared to furnish electric power to industries in Redcliff. The Mayor was asked to invite representatives from their Hat council to meet the 22nd council to discuss the matter more fully. The application of the Alberta Case for a license was granted.

Rev. Dr. Henderson is spending the week in town visiting his brother, Mr. Wm. Henderson.

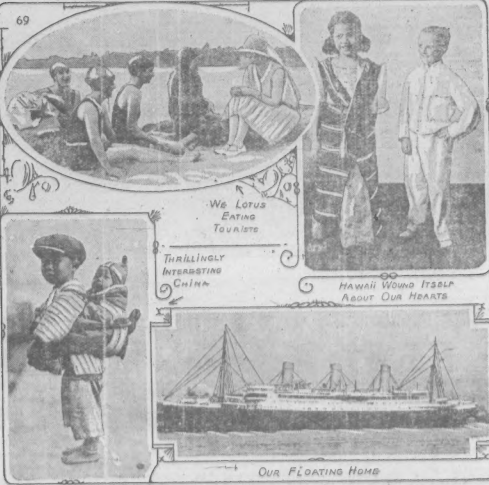

Mrs. Delaney and daughter, of Cussey, are spending this week in town the guests of Mr. Rogers.

Are you keeping in mind the stam pede whist drive and dance to be held in Cliff Hall on April 5th?

At a meeting of the Legion executive held last week, H. Leppard, was engaged as steward for the club rooms, which are expected to be opened up for business shortly.

Good progress is being made with the renovating of the new Legion club rooms on Third street. Already a vast improvement has been made in the appearance of the interior of the building. The work of many new of the best in the province.

Seven Seas Traversed

We passed in luxurious comfort, free from any care or irritating responsibility and absolutely without any disturbing incident from continent to continent," stated Lady Williams-Taylor on her return from a world cruise to board the Canadian Pacific liner, the "Empress of Australia," during which tour five continents, twenty-one countries and twenty-four seas were visited and seven seas traversed. "With children and a companion, Lady Taylor, we had anticipated to see the most penetrating magnificence and the most beautiful natural conditions of India and Australia, yet ever thrillingly interesting China. We steamed up and down the Singapore River, and saw firsthand the devastation of Canton. Myriads of junks, and almost uncounted sampans, held us spellbound. Singapore and its ever growing docks amazed us, and lovely Ceylon enchanted us. But Hawaii wound itself about our hearts and, to its haunting Aloha Oe, we saw it fade away through tropical haze. Not only are the islands more than fascinating, but the Royal Hawaiian Hotel would tempt any traveler to return. "After such a wonder tour of 132 days," continued Lady Taylor, "we Lotus Tourists have once again to face the realities of ordinary existence while the entire transportation and service organization of the mighty and far-reaching Canadian Pacific Railway and Steamship Lines are at our disposal. It was, indeed, with hearts full of gratitude and appreciation for our splendid hosts, staff, and service, and the constant and devoted attention of the cruise directors, that we finally bid farewell to our floating home—the "Empress of Australia."

The Red Rose Tea guarantee means what it says. If not satisfied return the unused part in the package and the grocer will refund your money.

TEA "is good tea"

RED ROSE ORANGE PEKOE is extra good

In the best package—Clean, bright aluminum

Radio Broadcasting In Canada

The Canadian Government recently appointed a Royal Commission to study and make report on the whole subject of radio broadcasting in Canada. That Commission, headed by Sir John Aird, is at present in Ottawa studying the methods employed in Great Britain and some of the continental countries. It proposes to also study the methods followed in the United States, and later, will hold public sittings throughout Canada with a view to obtaining the opinions of Canadian citizens.

The importance of this Commission's work can hardly be over-stated. Radio has, in a few short years, come to occupy a vital position in the lives of the people, while the future possibilities of this newest form of entertainment, and its importance as a medium of publicity, are such that the national interest-demand that a well defined policy in the interests of all concerned, but more particularly in the interests of the Dominion itself, be developed with the least possible delay.

The question that naturally arises in the minds of patriotic Canadians is whether or not the radio in Canada is to be dominated by wealthy and powerful private interests in the United States, such as the moving picture business has been in the United States, or will they develop an acceptable system of national broadcasting.

It has to be recognized and accepted as a fact that the great United States moving picture company controls the situation in this country, through actual ownership and management of Canadian moving picture theatres, at least through the making and distribution of the films that are shown in this country. There can be no successful denial of the assertion that because of this control of films it is possible for United States ideas, sentiments, enterprises, modes of living, and general propaganda of the kind, to be insidiously injected into the lives and thoughts of the Canadian people. In a word, it is possible for the United States to control the dissemination of ideas throughout Canada in the hands of private and wealthy corporations in a foreign country.

To a large extent, this has developed through the enormous circulation which United States magazines and periodicals of all kinds have secured in Canada. Apart from the effect which the reading matter in these periodicals has upon Canadian thought, the advertising matter constitutes a powerful medium of advertising millions of Canadian dollars across the line for the purchase of United States products.

In Great Britain radio broadcasting is under the direction of the Government through the medium of a national broadcasting organization. Owners of receiving sets pay a license fee, and the money thus realized is expended in providing worthwhile programmes. In the United States, on the other hand, broadcasting is in the hands of private interests. Good programmes are nationally broadcasted, but they are paid for through advertising sandwiched in at intervals throughout the programmes. All this material, specially prepared for United States consumption and to meet the requirements and promote the interests of United States business, is carried through the air into hundreds of thousands of Canadian homes every day in the year.

It is not necessary to be anti-American, or in the slightest degree unfriendly to the United States, to nevertheless realize that this is not a good thing for Canada as a national scene. Our Canadian broadcasting stations are widely scattered over the Dominion. They have not the broadcasting power of the big U.S. stations. Nor have they the resources to finance the same type of high class and expensive programmes offered in the United States. Canadian national advertisers have not the same large market to appeal to, and consequently cannot afford to spend tens of thousands of dollars in radio advertising.

Furthermore, do the Canadian people prefer private control of radio broadcasting, financed on the basis of advertising to the system which finds favor in Great Britain of national broadcasting financed through the payment of a reasonable annual license fee by owners of receiving sets who are the real beneficiaries of the broadcast?

The influence of radio must be admitted. It already occupies a position along with the newspaper and the moving picture as a medium of information and a source of education and entertainment. It is here, and here to stay, to grow, to develop as perhaps few ever now imagine. It will be a power for tremendous good or evil. It is essential that Canada, not neglecting the opportunity it presents, should adopt a wise policy in regard thereto.

Many Divorced Couples

With a marked increase in petitions within the past week, the divorce committees have the largest accumulation of divorce cases in history. The number now is 214, with 188 from Ontario and 26 from Quebec. Women seeking divorce in 121 cases and husbands in 93.

Minard's Liniment for the Grippe and Flu

The Porcupine gold area in the District of Cochrane, Northern Ontario, occupies first rank among the gold producing areas in Canada.

Excess acid is the common cause of indigestion. It results in pain and distress about two hours after eating. The quick corrective is an alkali which neutralizes acidity. The most reliable active is Phillips' Milk of Magnesia. It has remained standard with physicians in the 50 years of its history.

One spoonful of Phillips' Milk of Magnesia neutralizes instantly many

Covered Everything

Candidates for political office, successful or otherwise, who are required by law to file campaign expenses returns, may be interested in this particularly succinct one filed in Massachusetts: "Paid nothing, promised nothing, got nothing."

Why suffer from corps when they can be painlessly rooted out by using Holloway's Corp Remover.

At the Paris law courts there is an old lady of 80, who has been employed for the last 50 years as a shorthand writer, and is still active.

A Power Of Its Own.—Dr. Thomas' Elixer of Life has a saving to its own. All who have used it know this and they know it from the most valuable inherent available. It is a power of its own. It has been many years it has been praised as the leading liniment for man and beast.

Italy has forbidden the exhibition in any part of the kingdom of films depicting war episodes. The reason is that the war has been a thriving community, but now strawberry growing is the only industry. All the young people have left for more fruitful fields.

Use Minard's Liniment For The Flu.

Canada's Climate Attractive

Even Winter Weather Is Enjoyed By Majority Of People

The Montreal Star says: "It has been the fashion for many years to quote Canada as a wintry land. The habit has persisted, despite the actual facts regarding our climate, which probably presents the widest latitude in conditions of any country in the world today. But just now Europe is having a taste of what a really hard winter can achieve. Steel bridges have cracked in the north end, and the temperatures of a severity almost unknown in modern records. Shipping on the north sea is being frozen over—the Black Sea is beginning to freeze over—an event unrecorded within living memory.

Now if the people who are at present suffering so acutely were in Canada, they would be enjoying themselves. We have not been attacked by an unprecedented cold weather, and the general conditions throughout the country have not been such as to cause any discomfort. Indeed, there is good ground for utilizing the attractiveness of our climate as a factor in our commercial and industrial grants, instead of frightening them with lurid pictures of winter of an Arctic character. A little more snow and a little less frost rubbish, would help immensely but not in the least, to the wintering of the nation and flaming posters on the wall.

CORNS

Relief in 2 Minutes

Just a drop or two of PAIN-AID Corn Extractor, and the pain goes away. Relief is almost instantaneous. Removing corns with PAIN-AID is so easy, so sure, so painless—no cutting, no burning, no blistering, and it is the best. Don't suffer from corns. Get PAIN-AID Corn Extractor, the one sure relief for corns. Sold at every drug store.

Peace River Settlement

A Million Acres Of Land Taken Up By 5,000 New Homesteaders

Approximately one million acres of land were taken over last week by 5,000 new homesteaders in the Peace River country. The Rt. Rev. E. F. Robbins, D.D., Bishop of Athabasca, has been in the Peace River country for the last few days. "People ask me if the country will bear it," he says. "I fancy it will bear it for some 20 years at that."

LIFE WAS A BURDEN

Health Restored Through the Use Of Dr. Williams' Pink Pills

"I am writing to express my gratitude to what Dr. Williams' Pink Pills have done for me," says Mrs. W. J. Dowling, Tottenham, Ont., and writes: "I was a very weak woman, and I felt that life was a burden. The doctor told me that I was due to poor blood, but his medicine did not help me. I was very weak, my lips bluish and at the last exertion my heart would palpitate so violently that I would have to lie down. My feet and legs would be very cold, and all my friends thought I was in a decline. In this condition I was urged by a friend to try Dr. Williams' Pink Pills. I got three boxes, and to my delight, by the time I had used them I began to feel better. I got a further supply and kept on taking them. Daily, I felt myself growing stronger. The color returned to my cheeks and lips, and I felt a new interest in life. To sum up I can now say that I am feeling fine, for which I give the credit to Dr. Williams' Pink Pills, which I strongly recommend to all weak girls and women."

A useful book, "Building Up the Blood," will be sent free on request to Dr. Williams' Medicine Co., Brockville, Ont.

Dr. Williams' Pink Pills are sold by all druggists or will be sent by mail, post paid, on receipt of price, 75¢. Try them today.

Where Nobody Is Young
Twenty-five is young in the little village of Burdell, Hampshire. The inhabitants boast that their aggregate age, in proportion to the population, is the highest in the country. There are twenty-seven old folk whose years total 2,115—an average of seventy-eight each. Once there was a thriving community, but now strawberry growing is the only industry. All the young people have left for more fruitful fields.

Use Minard's Liniment For The Flu.

Italy has forbidden the exhibition in any part of the kingdom of films depicting war episodes. The reason is that the war has been a thriving community, but now strawberry growing is the only industry. All the young people have left for more fruitful fields.

Papered With Postage Stamps

In Near Bagmen, England, Is Known As Stamp House

Near Bagmen, where the King has been removed for his convalescence, there is an inn known as Stamp House. Its walls and ceilings are completely papered with old postage stamps and postcards of various kinds, which are torn from one side of a room to the other. The "collection" was taken many years ago by a Frenchman of the place, who had a passion for stamps, and papered his first room with them. It is believed as a result of a wager. Under the machine varnish there must now be hundreds of thousands, and report has it that many in semi-blind corners are rare and valuable.

BABY NOT GAINING? LOOK TO HIS DIGESTION

Babies can't gain when pouring waste in a sluggish digestive tract is forming gas, making them colicky, and causing much misery. The method doctors endorse, and millions of mothers know, is to give your baby improved Lactogen drops of pure vegetable, harmless Lactogen. It contains no sugar, and is very palatable, and child comfortable in the stomach. It is a perfect food, and perfect in every way, and gaining as he gets it. Get your Lactogen, long for the Fletcher signature on the wrapper.

Recipes For This Week (By Betty Barclay)

NEW YORK SALAD

4 slices pineapple.
1 cup celery.
1 cup nuts chopped.
2 oranges.
Cream mayonnaise.
Lettuce.

Arrange slices of pineapple on beds of lettuce, leaving a circle in center. Cut up the pineapple in the center, and mix with nut meat. Fill in center of pineapple, and garnish with four sections of orange, free from membrane, laid symmetrically on pineapple. Pass dressing separately.

BOILED CAKE FROSTING

1 cup sugar.
1 cup orange juice.
1 cup butter.
1 egg white.

In a small square saucepan put sugar and orange juice and mix. Heat and boil, being careful not to stir or disturb syrup until it will spin a long thread when it drops from the tip of spoon. Lift gently from fire, and pour slowly, while beating vigorously with a strong eggbeater, in a fine stream onto egg white which has been beaten until light but not stiff. Continue beating until frosting is stiff enough to stay in place, pour all at once onto cakes and spread over surface with a few movements of a large flat knife.

Minard's Liniment prevents Flu.

Standards Of Greatness

Wealth Or Titles To Judge Of An Individual's Pre-eminence

The mind of the average American is a curious mixture of materialism and sentiment, and we must bear those qualities in mind when we criticize him. He has a great big heart and a keen eye for the almighty dollar, while, for him, all his talents and purposes, the mark and emblem of man's success in life. Here, in Great Britain, titles, honors, orders and decorations are the rewards for pre-eminence. In America there is no "honor list." The only list that counts is the yearly statement of income tax paid by every citizen and published far and wide so that all can see how a man has risen above his fellows. No wonder, therefore, that everyone strives unceasingly to get rich—Sir George Armstrong in The London Observer.

Strain Of City Life

The stress of living in the cities is today a more potent factor in causing insanity than the loneliness of the isolated farm and settlement on which emphasis has been so frequently laid in the past. In Canada, according to Dr. J. M. Macpherson, medical superintendent of the Ontario Hospital, Brockville, with over 800 patients. On the other hand, the telephone, motorcar and radio have broken down the isolation of the farmer and settler and insanity therefrom is less frequent. It is found in the degree formerly known.

Being Of High Buildings

The Eiffel Tower (984 feet) weighs as much as three feet in a heavy gauge but the Woolworth Building (790 feet) and other skyscrapers do not move more than one and a half inches in high winds.

Just Right for This Weather

High in calories and warming carbohydrates—No fuss or bother—just warm in oven and serve with hot milk

Made By The Canadian Shredded Wheat Company, Ltd.

Need New Terminal Station

Frederick Palmer Recommends New Station At Montreal For C.N.R.

It is absolutely necessary to provide suitable passenger station accommodation for the Canadian National Railways at Montreal, says Frederick Palmer, the well known British railway terminal expert, whose services were retained by the government to study the matter of furnishing the eastern metropolis with more commodious terminal facilities for the Canadian National Railways and at the same time survey the possibility of a joint station for the C.N.R. and the C.P.R. Mr. Palmer's report to the minister of railways was made public.

Growing Importance Of Alberta's Oil And Gas Fields

The steadily growing importance of Alberta's oil and gas fields is shown in recently published figures. The production of oil wells for 1928, is placed at 489,531 barrels as compared with 321,154 barrels in 1927. Of the 1928 production the "Barrow Valley" field, in Southern Alberta, contributed 410,623 barrels of oil, and 70,784 barrels of crude oil, the remaining 117,4 barrels coming from the Wainwright field. The total production of natural gas for the province in 1928 is placed at 14,168,000 million cubic feet as compared with 12,933,801 million cubic feet in the previous year.

Fishing With Power

Electricity has vied the use of other sets in many parts of Germany. Two copper cables, placed one on top and one below the water, are charged with electricity. Fish in the vicinity are electrified and come to the surface where they are gathered by these modern fishermen.

The Value Of Birds

Only Protection Country Has Against Insect-Infested Trees

It is estimated that 10,000 caterpillars could destroy every blade of grass on one acre of cultivated land. Insect-infested trees may contain 12,000,000 aphids. The bird population of the country has been estimated at from 700 to 1,000 per square mile, and these few, though in number, are our best protection against the insect enemies which they were intended to destroy. The man who kills these insectivorous birds is helping to destroy his own country.

Nearly all children are subject to worms, and many are born with them. Spare them suffering by using Mother's Friend, an Extremist, an excellent remedy.

There are places in India where there are about 600 inches of rain in some years.

The total production of natural gas for the province in 1928 is placed at 14,168,000 million cubic feet as compared with 12,933,801 million cubic feet in the previous year.

Fishing With Power

Electricity has vied the use of other sets in many parts of Germany. Two copper cables, placed one on top and one below the water, are charged with electricity. Fish in the vicinity are electrified and come to the surface where they are gathered by these modern fishermen.

The Value Of Birds

Only Protection Country Has Against Insect-Infested Trees

It is estimated that 10,000 caterpillars could destroy every blade of grass on one acre of cultivated land. Insect-infested trees may contain 12,000,000 aphids. The bird population of the country has been estimated at from 700 to 1,000 per square mile, and these few, though in number, are our best protection against the insect enemies which they were intended to destroy. The man who kills these insectivorous birds is helping to destroy his own country.

Nearly all children are subject to worms, and many are born with them. Spare them suffering by using Mother's Friend, an Extremist, an excellent remedy.

There are places in India where there are about 600 inches of rain in some years.

Minard's Liniment prevents Flu

Standards Of Greatness

Wealth Or Titles To Judge Of An Individual's Pre-eminence

The mind of the average American is a curious mixture of materialism and sentiment, and we must bear those qualities in mind when we criticize him. He has a great big heart and a keen eye for the almighty dollar, while, for him, all his talents and purposes, the mark and emblem of man's success in life. Here, in Great Britain, titles, honors, orders and decorations are the rewards for pre-eminence. In America there is no "honor list." The only list that counts is the yearly statement of income tax paid by every citizen and published far and wide so that all can see how a man has risen above his fellows. No wonder, therefore, that everyone strives unceasingly to get rich—Sir George Armstrong in The London Observer.

Strain Of City Life

The stress of living in the cities is today a more potent factor in causing insanity than the loneliness of the isolated farm and settlement on which emphasis has been so frequently laid in the past. In Canada, according to Dr. J. M. Macpherson, medical superintendent of the Ontario Hospital, Brockville, with over 800 patients. On the other hand, the telephone, motorcar and radio have broken down the isolation of the farmer and settler and insanity therefrom is less frequent. It is found in the degree formerly known.

Being Of High Buildings

The Eiffel Tower (984 feet) weighs as much as three feet in a heavy gauge but the Woolworth Building (790 feet) and other skyscrapers do not move more than one and a half inches in high winds.

Anglo is the trade mark (Registered in Canada) of the BAYER Corporation. While it is a trade mark, it is not a trademark. The name "Anglo" is a trademark. The name "Anglo" is a trademark. The name "Anglo" is a trademark.

Northern Mining Possibilities

Vast Mineral Development Potential in Northern Saskatchewan
The Toronto Star says "Opening up a territory in northern Saskatchewan having vast mineral possibilities is foreseen by the present activity efforts at Rottenstone Lake, Lac la Ponge, and other northern fields would seem to substantiate repeated claims that Saskatchewan is on the eve of a tremendous mining development. Large mining companies, together with the reported surveys of a railway line by the Canadian Pacific Railway, bring the country to the front."

"It is understood from best sources that negotiations are now under way which may lead to the formation of a \$5,000,000 share subsidiary company by Manitoba East and the 'Island' enterprise (Vancouver Limited). The details are being completed, which would merge the claims of Manitoba East and those of Ventures at Rottenstone Lake."

"The significance of this lies in the fact that the proposed subsidiary company will have a large acreage, one group laying direct south, and another group directly north and northwest, of the 'Island' Brothers property where Consolidated Mining and Smelting Company is now operating."

"Of further interest in this merger of big interests is the fact Ventures and Smelters are building an eastern copper refinery and electrolytic plant. The two combinations together have what is regarded as the largest properties both in Saskatchewan and Manitoba."

Too Much Speed

Doing Everything in a Hurry Has Become a Habit With People

There is, says the Rev. W. W. White, of Toronto, too much speed in the modern standard of living, and hence life is suffering as a consequence.

The reverence for time and change is, unfortunately, one that cannot be denied. Evidence in support of it is abundant on every hand. People hurry over walking, driving and dressing. They bolt their breakfast. They rush to the office. They tear around during business hours if they work takes them outside. They scramble for lunch. They leap toward the golf links, and, once there, they walk around the links at a pace that would make a dog hot. They drink speedily, they bolt their dinner, and they speed away once more to the club. And we endure it because we have no time in which to sit back and realize that we could do something very much better.

Very Absent Minded

It was pouring with rain, and as the drawing master had a long way to go to his school, he decided the money for the taxi would be well spent. Unfortunately, there was no taxi in the station yard, and he had to be content with a cab.

"What's that?" he asked the driver, just as he was about to enter the vehicle.

The driver followed the direction of his far's gaze and pointing finger.

"Why," he exclaimed, on turning round, "that's me 'orn, that is!"

"Oh, is it?" retorted the drawing master, who was inclined to be absent-minded. "Well, just rub it out and draw it again."

Mr. Towday—Have you started concentrating on your new barn yet? Farmer Sile—Partly. An airplane landed on the site last week and dug an excavation deep enough for three barns.

It was sixty years ago. He was on his knees. "Accept me," he pleaded, "or I shall die." She refused him and he died—last week.

"A pennyworth of insect powder." "In a box."

"Not worth while—put it straight on me!"—Montague, Chatterbox.

W. N. O. 2762

Where Women Rule

Saskatchewan Egg Pool Directed Almost Entirely By Women

More men have not a monopoly of directing large and successful farmers' co-operative marketing organizations in Western Canada, where there are several such, indeed, they haven't! The Saskatchewan Egg and Poultry Producers, Ltd., with a total membership of over 18,000 and doing a gross annual turnover of approximately \$600,000, was organized by a number of farmers' wives less than three years ago. The first President was Mrs. John Holmes, of Assiniboia, Saskatchewan, and she still holds the office by popular choice. Only two of the six members of the Board of Directors are men. They were elected probably to prove that there is no sex superiority complex held by the overwhelmingly large number of women in the membership of the Pool.

The Saskatchewan Egg and Poultry Pool was organized because the wives regarded the system of individual selling as inefficient and under it the full measure of profits was not going to the producer. A charge of \$1 is made to those joining the Pool, one dollar of which is in organization fee, the other dollar is for one share of stock in the Pool. Members contract to deliver all their marketable eggs and poultry as required by the Pool. Initial payments are made to producers on delivery, and the balance as soon as the products are sold and the overhead charges are determined. All profits go to the members.

Last year the Pool marketed 18,500,000 eggs and over half a million pounds of dressed poultry, most of which went to Eastern Canada and the United States.

Mrs. Holmes came to Western Canada in 1905, from the village of Colterton, Nottinghamshire, England, with her husband. They settled at Assiniboia, Sask., in 1907, where they still live. The head office of the Saskatchewan Egg and Poultry Pool is in Regina.

One-Passenger Taxicab

One-passenger taxicabs are the latest thing in Constantinople, Turkey, according to recent British dispatches. The men folk don't seem to mind so much, but the good-ladies of the harem are objecting strenuously for two reasons. In the first place they must sit alongside the driver and in the second place Madame Pasha has no privacy whatever to enjoy her Turkish cigarettes.

Canada's Best Pork Production

The total number of pigs of all kinds produced in Canada in the year 1926-27 was 4,289,233 as compared with 3,986,245 in 1925-26. The increase in total number is due to an increase of 897,283 in the number of robbit pigs, and of 66,654 in the number of squirrel pigs.

A Profitable Industry

Value of Canada's Fisheries Runs Into Millions Yearly

A number of factors affecting the fishing industry of Canada have worked together to make 1928 the most generally profitable year since the war. Good weather during the season, heavy runs of fish, and profitable marketing agencies during short catches elsewhere, produced a total yield estimated at \$90,000,000. The industry represents a capital investment of over \$50,000,000, and gives direct employment to approximately 80,000 people and, in addition, there is a reasonable number employed in boat-building, rope-making and other subsidiary industries. Prosperity has been general throughout all divisions of the industry.

The value of the fish of various kinds taken from our inland waters amounts annually to about \$7,000,000, or approximately 15 per cent of the value of the total Canadian catch. The greater part of this yield comes from the Great Lakes, but due to the value of \$1,000,000 are taken from the Pacific lakes. It is interesting to note that a catch of about 1,700,000 pounds is obtained annually from Lake Alabasca. The results of the operations of 1928 are not yet available, but it is estimated that the yield and value will be at least equal to the average of recent years.

Sulphur in Gases Valuable

Canadian Smelters Have Waste of Fifteen Hundred Tons Daily

In a paper presented before a recent meeting of the Canadian Engineering Institute, W. H. DeBolt disclosed interesting statistics of the subject of sulphur contained in gases discharged in smelting plants in Canada. According to him fifteen hundred tons of sulphur are going to waste each day from Canadian smelters. The possibility of recovering part of this for commercial use is of particular interest as the Dominion imports approximately two hundred thousand tons of sulphur, valued at about \$2,000,000, a year. The imported sulphur is used largely by the pulp and paper mills. It is now proposed to produce liquid sulphur dioxide at the smelters for use in the paper mills.

Steel With a Spin

Production of steel with a spin is announced by the Westinghouse Electric and Manufacturing Company, Pittsburgh. The spin is produced through a process called nitriding, by playing the steel in a box of ammonia gas at 1,000 degrees. This ferries, says the manufacturer, "is thin skin extremely hard, quite tough and rust proof."

Aviation Progress

Tremendous Strides Made in Aviation in Canada During Recent Years

The tremendous strides which aviation has made during the past five years in Canada are shown today in figures compiled by the civil aviation branch of the department of national defence which in the same figures first is displayed at a banquet session.

The latest figures show that flying time in 1928 was about 40,000 hours, as against a total of 4,500 in 1925. Passenger mileage last year was about 3,000,000 miles, as against 225,000 in 1925.

During the nine years just past, freight poundage increased from 6,740 in 1920 to 2,500,000 in 1928. In 1920 there were no records of air transport, but in 1924, some 3,221 pounds of mail were carried in comparison with 284,163 last year.

Persistence Will Win

Those Who Really Try Find Nothing Is Impossible

Persistence will overcome all handicaps, and it is therefore, one of the most useful human qualities. Never to give up, to go on and on trying and trying over and over again can have only one result—success. It is harder for most people to accomplish tasks than it is for others, but the brilliant ones, the well-equipped bodies and mentally may be left for behind when it comes to test. Never despair! The important thing to do is the goal and work toward it constantly toward it. Nothing is impossible to the person who really tries. Failure comes from turning aside, surrendering to our weaknesses and allowing others to pass us on the road. Half the battle of life consists in persistence; determination and a set purpose work wonders.

Where People Walked

Many a man and woman in Michigan had walked five miles or so to school and put a larger value on all education on that account. Twenty-mile walks to the nearest doctor were common, and no doubt contributed to the recovery of the patient. A recent biography of an actor mentions a 35-mile hike to a fish camp.

Food Fishes More Important Since its inception in Canada, fish cultural operations have been almost entirely confined to the more important fresh water and marine food fishes, but in recent years more attention has been given to the propagation of game fish, such as speck trout in the east, and cut-throat and rainbow trout in the West.

Problem is to make money first and then make it last.

Key To Lasting Prosperity

Best Rules To Follow Are Suggested By Charles M. Schwab

Ten rules which seem to him to hold the key to lasting prosperity are suggested by Charles M. Schwab, chairman of the Board of Directors of the Bethlehem Steel Corporation. They are reported, as follows, from the New York Herald-Tribune:

1. Pay labor the highest possible wage. Prosperity is intimately related to a liberal wage scale.
2. Treat labor as a business partner. Successfulness in industry depends more on human relations than upon the organization of money and machines.
3. Conduct business in the full light of day. Public confidence and public suspicion may be separated only by a door.
4. Remember that the law of supply and demand is inexorable. And it also would be well to remember that there is no necessity for producing an excess.
5. Live and let live. Even progress industries can not afford to have the backward industries too far behind the procession—progress must be permanent, must be equitably distributed.
6. Welcome new ideas. To establish permanent institutions we must always be prepared for a change.
7. Never be satisfied that what has been achieved is sufficient. Inaugures and complacency do not promote progress.
8. Operate business on the most economical basis. Price-cutting, over-expansion, uneconomical methods of distribution are just as harmful to business and to the public as price-raising, monopolies, and related.
9. Look ahead and think ahead. It is easier to avoid depressions than it is to cure them.
10. Smile, be cheerful, and work upon the basis that the fundamental purpose of business is to promote the happiness of human beings.

World's First Telegram

Was Written On Stone Thirteen Hundred Years Ago

What was probably the first form of "telegram" in the world was exhibited at the International Congress of Orientalists at Oxford.

It consists of a fragment of stone on which is a Coptic inscription, which translated means "He died today." This message was brought by "express" messenger to the friends of an unknown man 1,300 years ago. The stone is exhibited in the exhibition of Oriental books and manuscripts opened in the Bodleian Library in connection with the congress. Among other exhibits is a collection of Indian playing cards with twelve cards to each suit, which were used in the sixteenth century. They are circular in shape and representative signs of the Zodiac.

Canada Has

Best Name

Other Countries Will Likely Adopt "Rayon" To Displace Artificial Silk

The French minister of commerce has declared his intention to make "rayon" the name for the new "artificial silk." He says a Paris cable, adding that, the question has been discussed recently in the French senate. In Germany the new fibre and textile are called gazzard, which means shiny stuff, or terms to that effect. Here on this continent, after rejecting a number of other proposals, the industry has become firmly well united in the use of "rayon." Britain still seems inclined to cling to "artificial silk," despite the opposition of the true silk industry, and also of the manufacturers themselves of the various cellulose fibres that approach in appearance the texture of the real silk, and genuine wrappings of the silk worm.

In choosing "rayon" a word at once suggestive and harmonious, a sort of ray of light, a good French word was used. France could have adopted the term spay. Apparently, however, she has not, and is herself floundering about in search of something better. We doubt her success. France could do no better one that will be accepted more readily. The one assured fact, however, is that the term "artificial silk" endures. Like synthetic beefsteak and manufactured eggs, the public will have none of such subterfuges. The public will have to place to place her own approval on "rayon" and settle the matter for all time. If she does that even Germany will be forced later on, the term gazzard is distinctly not an international word.

Usually Needs Correcting

Person Who Looks For Errors In Pronunciation Is Always A Fool

Many a pompous, dignified dandy and arrogant snooty dandy has sought in correcting the mispronunciation of words of their friends and relatives that the latter meet them in fear and trembling.

The amusing thing about this is that in most cases the pompous, dignified and arrogant ones mispronounce many simple words themselves.

Quite frequently you will hear the word "Salmon" pronounced "Sall-moon." Really, the "r" is as silent as the "q" in horse-radish. Our friend the dictionary tells that "Sall-moon" is the real pronunciation.

Watch carefully the chronic corrector of mispronunciations and you can easily locate a few errors as glaring as this. Correcting the corrector is the surest method of curing him and ridding the neighborhood of an insufferable pest.

Safety in the Air

The assistant secretary of the navy in charge of the Bureau of Aeronautics says that there was only one fatal accident to every million miles of airplane flight in the United States last year. A comparative study of last year's fatal automobile accidents and the total motor mileage might indicate that the air is now safer than the highways.—Providence Journal.

Edmonton Public Utilities

All former records have been broken for Edmonton's profit. From public utilities by the showing of a surplus of \$507,785. This surplus placed all the utilities—street railway, power, plant, electric light, city telephone and water works—in the profit-paying class.

Him—I don't like you inviting that fellow to dinner. He used to kiss you before we were married.
Her—Well, so did you.
Him—Yes, but I've got over it and maybe he hasn't.

Serving circles are out of fashion—there is no little to new.

HONEYMOON

"Take that, you brute. I shall write to mamma and tell her you were going to strangle me!"—Bess Hunter, Madrid.

The Canadian National Railways are asking Parliament, at its present session, for the right to construct 695 miles of new railroad. Of this amount, 542 miles are to be built on the prairies. The proposed lines fall into two general classes; lines which afford economic and operating advantages to the system and branches for the purpose of general development and colonization of territory which will constitute feeders to the system. The proposed lines and their relationship to existing lines and to lines under construction are shown on the above map. The proposed lines are indicated by broken lines. Existing lines are shown in solid black and lines which are under construction and all of which will be ready for operation this year, are shown by a jagged line. The company proposes to complete all the new branch lines within three years.

One of the most important of the proposed lines is that between Aberdeen and Melville, in Saskatchewan. This line with the proposed extension north-easterly from Ridgetown, will shorten considerably the distance between the Hudson Bay Railway and all of the territory south-west of it.

The branch line programme summarized is as follows: St. Walburg, Sask., to Bonnyville, Alta., 117 miles; Aberdeen, Sask., to Melville, Sask., 84 miles; Hinton, Sask., to Glenbow, Sask., 39 miles; Melfort, Sask., to Swift Current, Sask., 31 miles; Ridgetown, Sask., north-easterly 30 miles; Alliance, Alta., southeasterly to Dobson, Alta., 82 miles; Bulwer, Alta., south-easterly from the proposed Alliance-Dobson line, 35 miles; Hearnshaw, Alta., to Stoupa, Alta., 41 miles.

Quickly soothing and healing 7am-Buk is splendid for skin troubles of all kinds. It heals with the aid of Nature's herbs, in Nature's own way.

Higher Buildings Now Possible

New Eight Brick Will Mean 100-Story Skyscraper in Prediction

The 100-story skyscraper will be realized within the next decade in the largest American cities, and within twenty years it will be, as common as the present four-story building. Improvement in building materials make the expansion upward a certainty.

Such were some of the views of the metropolitan future presented by George A. Bala, professor of ceramic research, at the Ohio State University, in Chicago. The way displayed at the ceramic exposition. He based his prediction on a new and improved form of brick devised by Edward C. Kearns, of Chicago, engineer, secretary of the association.

"Very little improvement has been made until now in brick since the days of Pharaoh," said Bala. "The brick he made of clay and straw was almost as durable and strong as that of today. It is a ceramic material that the ancient king of Egyptians used brick in order to make the brick lighter, but today we use straw to prevent cracking or lamination."

"The idea occurred to Mr. Kearns, and was endorsed by others, that if the proper chemicals were added to the clay it might be inflated or bloated and still not weaken. Experiments were begun last October and have been carried through to success. It has been found that if soda are added to the ash of the brick, the clay the same effect is had as that of yeast on bread dough—expansion without destroying the fiber or breaking down the strength."

"The discovery by Mr. Kearns makes possible a new brick weighing only one-sixth as much as the ordinary brick, with greater strength and greater fire-resisting qualities. Ordinary brick weighs 120 pounds to the cubic foot; this brick weighs twenty. An eight-inch wall of ordinary brick will resist a temperature of 2,500 degrees on one side for nine hours without transmitting heat to the interior. This new brick will resist 250 degrees on the other side. This new brick will resist 2,500 degrees of temperature for fifteen hours."

"Heights of buildings are limited only by weight, bulk and lack of resiliency of materials. This new brick will easily permit 100 stories and perhaps 150 stories, because of its extreme lightness and many other advantages, and its resistance qualities make possible thinner walls, there fore less bulk and incidentally greater efficiency, because more space is released for practical use."

Alberta Fox Industry

Increase in the Industry Has Been Almost Phenomenal

In reviewing the work of the Alberta Silver Fox Breeder's Association, at its annual meeting in Calgary, S. M. Hartford, vice-president, said that there had recently been a marked increase in membership, which now stands at 121. He stated that the fox industry was the most profitable of all livestock industries, and that Alberta had without doubt, the finest climate in the world for raising healthy animals and producing the finest possible fur. The increase in the industry in the province had been almost phenomenal. In 1914 there were only ten ranches and 31 breeders whereas now there are approximately 140 ranches and 275 breeders.

An Interesting Relic

Watch Supposed To Have Belonged To Mary, Queen Of Scots

When Jedburgh, Scotland, acquired Queen Mary's house, the city officials sent out messages asking for historic relics to be added to the house collection.

There has been a response from several quarters, and the latest donation is a watch believed to have been carried by Mary, Queen of Scots, on her memorable journey on horseback from Jedburgh to Heriot's Castle, to visit her husband, the Warden of the Marches, who had been wounded in an encounter with "Little Jack Elliot." The ill-fated ride took place in mid-October, 1566, and history records that during the return journey, which was performed in wind and rain, horse and rider were bogged in the mud at a spot since known as the Queen's Ride.

It is surmised that during her struggle to reach Arran ground the ring of the Queen's watch was broken, and dropping to the ground, the watch was lost. Two hundred years afterwards the interesting relic was picked up in the neighborhood of the Queen's Mile by a shepherd, it having been unearched by a mole.

The watch is eight-sided, and measures 1 1/2 inches by 1 1/4 inches. The ring is missing, and the hinged back and also the front cover are somewhat damaged.

The dial is in a wonderful good state of preservation; the hour figures are perfectly clear, and the hands are distinct evidences of delicate carving and fine workmanship made.

The donor is Mr. William Pitt, who has for many years been resident in the Transvaal, Africa. In an accompanying letter Mr. Pitt says that, in the opinion of experts, the watch dates back to about 1560, and is of French manufacture.

Thousand Gallon Cow Is Ireland's Objective

If Attained Butter Imports Would Not Be Necessary

Ireland's new slogan is "Give us a 1,000 Gallon Cow." Always a land of paradoxes, one of the Free State's principal exports is butter—and yet great quantities of foreign butter are imported every year.

The explanation is that there is little winter dairying in Ireland, and that the Irish cow is too scanty in her milk supply. To meet this situation a Cow Testing Association has been formed, and is gradually improving the milk yield. In 1911 the average yield was only 480 gallons per cow. It has been raised in 1917 to 557 gallons.

Some Irish herds have shown upward of an average yield of 1,000 gallons annually, and an attempt is made to bring all cows up to that standard.

U.S. and British Amity

Now To Place Friendship Of Two Nations On A Firm Foundation

Sir Austen Chamberlain, secretary of state for foreign affairs, in addressing a political meeting recently, said he considered that it would be "within our power to make proposals to the United States which will place our friendship on a firm footing."

He did not mention the armaments question by name, but it was obvious that he had it in mind in discussing the relations between the two countries.

"I am confident it is in our power to make proposals to the United States which will place our friendship on a firm footing," said Sir Austen.

Miss Sill in a message to many munition makers, some of which might yet be dangerous, are still lying in British waters. The Admiralty has warned mariners. Masters of trawlers and other vessels are advised to take special precautions. The areas where the mines are scattered include Land's End, the Straits of Dover, the Norfolk and Yorkshire coasts, the Orkneys, and the Hebrides.

What League Has Cost Canada

The League of Nations has cost Canada \$1,638,510 since its inception to the present, and was the first in the House of Commons to a query by T. L. Church, Conservative, Toronto, N.W.

When a carefully considered plan promises success, never hesitate to take the chance.

Hungarian women have given the franchise in 1918 and later lost it.

Little Helps For This Week

"And Jesus saith unto them, How many leaves have ye?—Matthew xv. 34.

So still, dear Lord, in every place Thou standest by the tolling roil With love and pity in Thy face.

And givest of Thy help and grace To those who meekly bend the knee.

The lives which seem so poor and low The hearts which seem so empty and low.

The hearts which seem so empty and low The hearts which seem so empty and low.

"How many leaves have ye?" It is the Lord's first question; and the hands of those who really want His help search their robes to see what they have hidden there. One brings his joy; another brings his pain; another brings his helpless desire; another brings his poor resolution; another has nothing to bring except just his sorrow that he has nothing.

It is a poor collection—only seven leaves and a few little fishes—but it is enough: His blessing falls upon them, and they come back to the souls which gave them up to Him multiplied into the means of healthy happy lives.—Phillips Brooks.

Savings Certificates Popular

That Alberta Government Provincial Savings Certificates are recognized as a sound investment is indicated by the fact that sales during 1918 reached a total of \$135,950 and above all withdrawals. The net purchases during the year were more than double those of 1917. A report for the year by the Treasury Department places the total amount of outstanding savings certificates at \$11,264,940. These certificates are held largely by farmers of the province.

"Laugh heartily, speak kindly, and serve willingly," are among a list of health rules issued by Dr. W. A. Davey, Hull, England, medical officer.

No Ground For Pessimism

Statistics Show Large Percentage Of University Graduates Remain In Canada

An independent survey of figures dealing with the whereabouts of our university graduates is somewhat enlightening in the way of refuting exaggerated statements to the effect that they are flocking to the United States. The latest available statistics show that 82.8 per cent. of the living graduates of the University of Toronto are resident in Canada and only 13.6 per cent. in the United States; the University of Western Ontario has retained 80 per cent. while 18 per cent. of the University of Manitoba's graduates have remained in their native country. This story tends a reputation in almost every college in the Dominion. Moreover, many graduates have found their way elsewhere only temporarily and will return in due course. Evidently there is not so much room for pessimism as many have imagined.

STORMY WEATHER

HARD ON BABY

The stormy, blustery weather of December and March is extremely hard on babies and young children. It is necessary to keep them warm and to keep them contented to the best of their ability. They are overheated or badly ventilated. The little ones catch cold and their whole system becomes racked. To guard against this a box of Baby's Own Tablets should be kept in the home and an occasional dose given the baby to keep him fit, and to prevent him from getting into a condition which might grip him to restore him to his normal state and keep him in good health. Baby's Own Tablets are a condition which might grip him to restore him to his normal state and keep him in good health. Baby's Own Tablets are a condition which might grip him to restore him to his normal state and keep him in good health.

They are a mild but thorough laxative which regulates the bowels, cleans the stomach, brings up colds and simple fever; banish constipation and indigestion and make the child of both sexes. The Tablets are sold by medicine dealers or by mail at a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Only the office with no salary attached is obliged to seek the man.

To Check "FLU," Grippe

Fights the Germs in the Throat Before They Invade Other Parts of the Body.

EFFECTIVE PREVENTIVE MEASURES EXPLAINED

Simple precautions taken now will enable you to fight dread "flu" which is sweeping rapidly through the whole country. The germs of influenza gain access to the body through the mouth and throat. Keep the throat healthy and you go a long way towards stopping the trouble. An effective means of prevention is to gargle the throat three or four times daily with Nerville's. Half a teaspoonful of Nerville's in water makes a most efficient gargle. The germ-killing properties of Nerville's quickly destroy any bacteria in the mouth and throat. If the throat is hoarse, if you have a cough—be sure, to rub the neck and chest with Nerville's. Every drop of it will rub in, and out will come the congestion.

Of course it is absolutely necessary to house-clean the system with Dr. Hamilton's Pills which stimulate the eliminating organs, and rid the system of disease-breeding wastes. This combination treatment of Nerville's and Dr. Hamilton's Pills will give prompt and entirely satisfactory results.

WINDOLITE The Improved Glass Substitute

MADE IN ENGLAND

COMES WITH A MESSAGE OF HEALTH

TIME runs in the all-powerful life producer. Nature's universal distributor and germ destroyer, as well as stimulant and tonic. WINDOLITE is the sun's most important ally.

Medical research has definitely proved that from the point of view of health and hygiene, the most effective means of sunbathing is the use of WINDOLITE. The greatest power for the prevention and cure of disease and debility.

Science has further established that ordinary window glass does not allow the passage of Ultra-Violet rays, so that by using glass we are actually excluding those vital health-giving rays. Therefore the invention of WINDOLITE has completely satisfied the demand for a material which is transparent, has conclusively proved that it is a most effective substitute for glass, that it freely admits the Ultra-Violet rays, and that it has a most beneficial effect on the growth and development of plants, and on the well-being of cattle, enabled for the first time to have healthy light and darkness in their sheds.

Indeed, the discovery of WINDOLITE has during the last six years completely revolutionized gardening, given a new stimulus to the breeding of flowers, and the raising of poultry and furbearing animals, has greatly improved the raising of domestic and household requirements.

WINDOLITE stands for 100 per cent. sunlight. It makes light but strong windows for cattle sheds, dairy stables, poultry houses, brooders and all out buildings. It is a perfect substitute for glass, and is easy to use. It is now being successfully used for sunrooms, verandas, schools, factories, hospitals, etc.—will not crack or chip—sets with an ordinary pair of pliers and is easy to use. WINDOLITE is supplied in rolls as long but in one width of 50 inches only. A square yard of WINDOLITE weighs about 14 lbs., while a square yard of glass of ordinary thickness, weighs about 120 lbs. The improved WINDOLITE requires no varnish. WINDOLITE is made in England.

Price \$1.50 Per Square Yard, F.O.B., Toronto.

Use WINDOLITE and let YOUR PLANTS and YOUR CHICKENS YOUR CATTLE

We Know How and We Mean Business

THE Radio Set that lacks in sensitivity is useless in many parts of Canada.

In the Westinghouse Receivers sensitivity has been developed to the full possibilities of present day Radiotrons. More than that, the 6 tube Westinghouse Models have power in abundance—reserve power to bring in the very distant stations with clarity and reasonable volume.

Extraordinary sensitivity is the result of the combined laboratory engineering of Westinghouse Radio and Radiotron Engineers to create the perfect radio receiver for Canadian conditions.
